

## The Model for the Consortium, Existing Programs, and Future IHE Model Sites

### Major Principles of Curriculum Design

Adapted from Wehman & Kregel (1997, p. 3-6), *Major Principles of Curriculum Design*.

Project STING RAY curriculum was designed according to Wehman and Kregel's (1997) principles. These principles indicate that curriculum for our students should be individualized and person-centered, functional or practical to maximize independence, adaptive or adjustable to meet each student's needs, and ecologically relevant or based upon the student's environments and major activities. The students' primary educational experiences or "classroom" will be the university campus and all the components of university life (extracurricular activities, sporting events, membership in clubs/organizations).
